

Executive Readout — Project FORESIGHT

For: Head of Operations & Finance Lead · NorthBay Living scenario

Important: The available project materials did not include the expected raw extracts. The figures below are synthetic-prototype outputs and must be replaced/revalidated with real client data before operational use.

The Bottom Line

The current prototype identifies ■10,020,387 of total value at stake across 200 SKUs: ■4,184,505 in stockout sales risk and ■5,835,882 in overstock capital locked.

Decision	SKU count
Reorder Now	1
Markdown / Clear	5
Healthy	194

Forecast confidence

Rolling-origin validation gives average WAPE of 0.199 for LightGBM versus 0.236 for the seasonal-naive baseline. The model wins all four folds in the current run. The dashboard shows a planning interval around forward forecasts; this is not a calibrated statistical confidence interval.

Recommended actions

1. Action the Reorder Now exception first. 2. Review Markdown / Clear candidates with merchandising. 3. Refresh the dashboard weekly. 4. Validate the prototype on real client extracts before making financial commitments.

Technical delivery

D1 pipeline · D2 EDA memo · D3 forecast/backtest · D4 risk scoring · D5 Streamlit dashboard · D6 FastAPI scoring service · D7 executive readout.
